They are also useful for treating Crohn's disease, cystic fibrosis, coeliac disease, indigestion, obesity and other gastrointestinal mal-absorption problems. Gastrointestinal lipid related conditions can be therapeutically or prophylactically treated via a method of hydrolysing a lipid comprising expressing in a target cell or contacting a target cell with an effective amount of DNA or protein of the invention. Sequences AAU83841-AAU83897 represent Bacillus lipase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            13-JUL-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to new Bacillus lipase enzymes and the nucleic acids encoding them. The lipase polypeptides are useful as supplements in animal feeds, as agents of flavour modification and fat modification in human foodstuffs (e.g. cheese), as agents in the creation of food emulsifiers, as agents for tranning/processing of leather and as cleaning agents. They are also useful for treating Crohn's disease, cystic fibrosis, coeliac disease, indigestion, obesity and other gastrointestinal mal-absorption problems. Gastrointestinal lipid related conditions can be therapeutically or prophylactically treated via a method of hydrolysing a lipid comprising expressing in a target cell or contacting a target cell with an effective amount of DNA or protein of the invention. Sequences AABUS3841-AABUS3897 represent Bacillus lipase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to new Bacillus lipase enzymes and the nucleic acids encoding them. The lipase polypeptides are useful as supplements in animal feeds, as agents of flavour modification and fat modification in human foodstuffs (e.g. cheese), as agents in the creation of food emulsifiers, as agents for tanning/processing of leather and as cleaning agents. They are also useful for treating Crohn's disease, cystic fibrosis, coeliac disease, indigestion, obesity and other gastrointestinal mal-absorption problems. Gastrointestinal lipid related conditions can be therapeutically or prophylactically treated via a method of hydrolysing a lipid comprising expressing in a target cell with an effective amount of DNA or protein of the invention. Sequences AAU03841-AAU083897 represent Bacillus lipase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Crohn's disease and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to new Bacillus lipase enzymes and the nucleic acids encoding them. The lipase polypeptides are useful as supplements in animal feeds, as agents of flavour modification and fat modification in human foodstuffs (e.g. cheese), as agents in the creation of food emulalifiers, as agents for tanning/processing of leather and as cleaning agents. They are also useful for treating Crohn's disease, cystic fibrosis, coeliac disease, indigestion, obesity and other gastrointestinal mal-absorption problems. Gastrointestinal lipid related conditions can be therapeutically or prophylactically treated via a method of hydrolysing a lipid comprising expressing in a target cell or contacting a target cell with an effective amount of DNA or protein of the invention. Sequences AAU83841-AAU83897 represent Bacillus lipase

The lipase polypeptides are useful as supplements in animal feeds, as agents of flavour modification and fat modification in human foodstuffs (e.g. cheese), as agents in the creation of food emulsifiers, as agents for tranning/processing of leather and as cleaning agents. They are also useful for treating Crohn's disease, cystic fibrosis, coeliac disease, indigestion, obesity and other gastrointestinal mal-absorption problems. Gastrointestinal lipid related conditions can be therapeutically or prophylactically treated via a method of hydrolysing a lipid comprising expressing in a target cell or contacting a target cell with an effective amount of DNA or protein of the invention. Sequences AAUG33841-AAUG33897 represent Bacillus lipase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   coeliac disease;

gastrointestinal mal-absorption problems. Gastrointestinal lipid related conditions can be therapeutically or prophylactically treated via a method of hydrolysing a lipid comprising expressing in a target cell or contacting a target cell with an effective amount of DNA or protein of the invention. Sequences AAU83841-AAU83897 represent Bacillus lipase
                                                                                                                                     The invention relates to new Bacillus lipase enzymes and the nucleic acids encoding them. The lipase polypeptides are useful as supplements in animal feeds, as agents of flavour modification and fat modification in human foodstuffs (e.g. cheese), as agents in the creation of food emulsifiers, as agents for tanning/processing of leather and as cleaning agents. They are also useful for treating Crohn's disease, cystic fibrosis, coeliac disease, indigestion, obesity and other

                                                                                                                                                                                                                                                                                                                                       The invention relates to new Bacillus lipase enzymes and the nucleic acids encoding them. The lipase polypeptides are useful as supplements in animal feeds, as agents of flavour modification and fat modification in human foodstuffs (e.g. cheese), as agents in the creation of food emulsifiers, as agents for tanning/processing of leather and as cleaning agents. They are also useful for treating Crohn's disease, cystic fibrosis, coeliac disease, indigestion, obesity and other gastrointestinal mal-absorption problems. Gastrointestinal lipid related conditions can be therapeutically or prophylactically treated via a method of hydrolysing a lipid comprising expressing in a target cell or contacting a target cell with an effective amount of DNA or protein of the or the lipid center of the invention. Sequences AAU83841-AAU83897 represent Bacillus lipase

The lipase polypeptides are useful as supplements in animal feeds, as agents of flavour modification and fat modification in human foodstuffs (e.g. cheese), as agents in the creation of food emulsifiers, as agents for tanning/processing of leather and as cleaning agents. They are also useful for treating Crohn's disease, cystic fibrosis, coeliac disease, indigestion, obesity and other gastrointestinal mal-absorption problems. Gastrointestinal lipid related conditions can be therapeutically or prophylactically treated via a method of hydrolysing a lipid comprising expressing in a target cell or contacting a target cell with an effective amount of DNA or protein of the invention. Sequences AAU83841-AAU83897 represent Bacillus lipase polypeptides of the invention.

                                                                                          Matches
                                                                                                         Best
                                                                                                                                                                                 The invention relates to new Bacillus lipase enzymes and the nucleic acids encoding them. The lipase polypeptides are useful as supplements in animal feeds, as agents of flavour modification and fat modification in human foodstuffs (e.g. cheese), as agents in the creation of food emulsifiers, as agents for tanning/processing of leather and as cleaning agents. They are also useful for treating Crohm's disease, Cystic fibrosis, coeliac disease, indigestion, obesity and other gastrointestinal mal-absorption problems. Gastrointestinal lipid related conditions can be therapeutically or prophylactically treated via a method of hydrolysing a lipid comprising expressing in a target cell or contacting a target cell with an effective amount of DNA or protein of the invention. Sequences AAU83841-AAU83897 represent Bacillus lipase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ID
                                                                                                                                               The invention relates to new Bacillus lipase enzymes and the nucleic acids encoding them. The lipase polypeptides are useful as supplements in animal feeds, as agents of flavour modification and fat modification in human foodstuffs (e.g. cheese), as agents in the creation of food emulsifiers, as agents for tanning/processing of leather and as cleaning agents. They are also useful for treating Crohn's disease, cystic fibrosis, coeliac disease, indigestion, obesity and other gastrointestinal mal-absorption problems. Gastrointestinal lipid related conditions can be therapeutically or prophylactically treated via a mathed of badrolusing a limid corporation are attract for lipid mathed by the food of the complete 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Lipase; Bacillus; animal feed; flavour modification; fat modification; human foodstuff; cheese; food emulsifier; leather tanning; enzyme; leather processing; cleaning agent; Crohn's disease; cystic fibrosis; coeliac disease; indigestion; obesity; gastrointestinal mal-absorption; gastrointestinal lipid related condition; antiinflammatory; respiratory;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δ
                                                                      acids encoding them. The lipase polypeptides are useful as supplements in animal feeds, as agents of flavour modification and fat modification in human foodstuffs (e.g. cheese), as agents in the creation of food emulsifiers, as agents for tanning/processing of leather and as cleaning agents. They are also useful for treating Crohn's disease, cystic fibrosis, coeliac disease, indigestion, obesity and other gastrointestinal mal-absorption problems. Gastrointestinal lipid related conditions can be therapeutically or prophylactically treated via a method of hydrolysing a lipid comprising expressing in a target cell or contacting a target cell with an effective amount of DNA or protein of the invention. Sequences AAU83841-AAU83897 represent Bacillus lipase polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 32;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acids encoding lipase enzymes which are useful in animal feeds, as agents of flavour modification and Crohn's disease and coeliac disease -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Giver
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              13-JUL-2001; 2001WO-US22160
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Bacillus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gastrointestinal.

N-PSDB;
       The invention relates to new Bacillus lipase enzymes and the nucleic acids encoding them. The lipase polypeptides are useful as supplements in animal feeds, as agents of flavour modification and fat modification in human foodstuffs (e.g. cheese), as agents in the creation of food emulsifiers, as agents for tanning/processing of leather and as cleaning agents. They are also useful for treating Crohn's disease, cystic fibrosis, coeliac disease, indigestion, obesity and other gastrointestinal mal-absorption problems. Gastrointestinal lipid related conditions can be therapeutically or prophylactically treated via a matched of standard treatment or prophylactically treated via a matched of standard treatment.
                                                                                                                                                                                           Nucleic acids encoding lipase enzymes which are useful in animal feeds, as agents of flavour modification and Crohn's disease and coeliac disease -

the invention. Se
       The invention relates to new Bacillus lipase enzymes and the nucleic acids encoding them. The lipase polypeptides are useful as supplement animal feeds, as agents of flavour modification and fat modification human foodstuffs (e.g. cheese), as agents in the creation of food emulations.

```

The invention relates to new Bacillus lipase enzymes and the nucleic acids encoding them. The lipase polypeptides are useful as supplements animal feeds, as agents of flavour modification and fat modification in human foodstuffs (e.g. cheese), as agents in the creation of food

They are also useful for treating Crohn's disease, cystic fibrosis, coeliac disease, indigestion, obesity and other gastrointestinal mal-absorption problems. Gastrointestinal lipid related conditions can be therapeutically or prophylactically treated via a method of hydrolysing a lipid comprising expressing in a target cell or contacting a target cell with an effective amount of DNA or protein of the invention. Sequences AAU83841-AAU83897 represent Bacillus lipase polypeptides of the invention.
The invention relates to new Bacillus lipase enzymes and the nucleic acids encoding them. The lipase polypeptides are useful as supplements animal feeds, as agents of flavour modification and fat modification in

They are also useful for treating Crohn's disease, cystic fibrosis, coeliac disease, indigestion, obesity and other gastrointestinal mal-absorption problems. Gastrointestinal lipid related conditions can be therapeutically or prophylactically treated via a method of hydrolysing a lipid comprising expressing in a target cell or contacting a target cell with an effective amount of DNA or protein of the invention.
